Lucid Dream ver 1, 2

Two joysticks.

Lucid Dream is a game «console». It's a computer which works after installing specialized programs. Version one and two are like the Nintendo Wii.

Lucid Dream Beta β

It was developed further. They merely added functions to feel weight and touch in the original versions. There was an option to put use body movements, but like in Wii, it was not popular. Because it distracted you to much in ways that are not possible for the normal human body, so that option is not popular. Shake your arm left and right - Walk. Stomp your feet - run. People can use movements like that after some practice. There is a safety program, which prevents you from doing anything that is more than one metre away from the physical area you are in. It's enough to make you feel like you're experiencing the real thing, but words not for motion sickness.

Lucid Dream Final

It's a perfect way to free the mind from the body. If you've ever had a lucid dream in your sleep, it's easy for you to understand. When your dream is very strong, and you believe it's real, you sometimes move your body unconsciously. You roll over, and even fall off the bed sometimes. The safety program for this hasn't been developed yet. If you tie your arms and legs to the bed, then you can use it.

*Yurai was made by Seo Yeon's father for medical purposes. He was devastated when it was rejected by Ji Hoon's father.

Tell me honestly. You didn't read the long explanations right? It's okay. Even if you don't read it, you can still understand the story.
